

# GET SALES INSIGHTS IN REAL-TIME WITHOUT AFFECTING POS PERFORMANCE

As an Avero Right Now for Avero Mobile user, it is important for you to meet minimum system requirements to ensure that your point of sale system's performance will not change in any way.

## MINIMUM SYSTEM REQUIREMENTS:

Windows 7 or newer

CPU usage less than 75%

2GB usable RAM

Memory usage less than 75% for systems with less than 4GB usable memory

Memory usage less than 85% for systems with more than 4GB usable memory

Supported Systems: Aloha, Digital Dining, Micros 3700, PixelPoint, PosiTouch, and Restaurant Manager

## PROGRAMS THAT IMPACT POS PERFORMANCE

Using your POS to run nonessential programs, especially ones that require significant processing, memory, and network usage can negatively impact your system's performance. Here is a list of program type to avoid using with your POS:

BITTORENT

STREAMING SERVICES (SPOTIFY, ITUNES, ETC.)

FILE SHARING/SYNCING (DROPBOX, ICLOUD, ETC.)

IIS SERVER

SQL SERVER (IF NOT REQUIRED BY POS)
